SUMMARY

IT student (expected 2026) specializing in Artificial Intelligence with hands-on experience in machine learning, computer vision, and real-world AI projects. Experienced in integrating AI with IoT and embedded systems to develop smart, data-driven solutions. Passionate about building intelligent technologies and continuously improving problem-solving and technical skills.

EDUCATION

Bachelor of Information Technology (Second-Class Honors)

Jun 2022 – Oct 2026

Imam Mohammad Ibn Saud Islamic University

EXPERIENCE

AI Trainer | Ai Arena

Jun 2025 – Jan 2026

- Delivered hands-on training in AI, robotics, and embedded systems.
- Guided students in programming, problem-solving, and building intelligent solutions.
- Conducted practical sessions using Arduino and AI-related technologies.

AI Intern | Samsung Innovation Campus

Oct 2025 – Dec 2025

- Completed intensive training in AI and Computer Vision via Misk Skills partnership.
- Developed "WildArabia," an AI-powered wildlife identification system using RAG-based technologies.
- Designed intelligent classification solutions for Saudi wildlife and environmental awareness.
- Collaborated with teams to develop and present AI-driven solutions.

PROJECTS

SEEN – Smart Emergency Wearable System (Graduation Project)

- Developed a complete emergency response system including a wearable device and cross-platform mobile applications (iOS & Android)
- Built a cloud-connected solution enabling real-time monitoring and instant alert notifications for enhanced user safety

Makani – AI-Powered Real Estate Search Engine 🌐

- Developed an intelligent search platform using NLP and LLMs to process real estate queries.
- Built a machine learning pipeline for query understanding, information extraction, and ranked search results

WildArabia – AI-Based Wildlife Identification System

- Developed an AI-powered system using computer vision to identify and classify wildlife species
- Built a data-driven solution for analyzing environmental data and providing accurate species recognition

Tabayyun – AI-Driven Anomaly Detection System

- Developed an AI-based system to detect abnormal patterns in financial transactions using machine learning 12/2025 – 01/2026
- Built a data-driven approach for early anomaly detection and intelligent analysis of transaction behavior

SKILLS

Artificial Intelligence & Machine Learning

Machine Learning, NLP, Computer Vision, PyTorch

Programming

Python, JavaScript, C++, Java, Dart

Backend & Web Development

Backend: FastAPI, Flask, SQL, Frontend: React, HTML, CSS

CERTIFICATES

AI & Computer Vision Training

Misk Skills

Advanced Artificial Intelligence course

KAUST

Building LLMs from Scratch

SDAIA

Mechatronics Bootcamp

Tuwaiq Academy

UI/UX Training

Tuwaiq Academy

Developing Generative AI Solutions

SDAIA

LANGUAGES

Arabic

English
